

# DENTISEPT

Chlorhexidine 2 mg/g

## Directions

- ▶ Attach the applicator to the Dentisept tube.
- ▶ Using the applicator, apply a pea sized amount along the outside of the teeth focusing on the gumline.
- ▶ With a finger, gently cover the gums and teeth.
- ▶ Apply once daily or weekly, after meals for best results.

## Doggy breath is not normal!

- ▶ Bad breath is actually one of the most common signs of dental disease.
- ▶ 80% of dogs and cats over 3 years old have gum disease.

**“Without intervention, dental disease is always progressive.”**

## What is dental disease?

- ▶ Every day, plaque (a sticky film of bacteria and sugars) forms on the teeth.
- ▶ Plaque hardens to tartar, holding the bacteria onto the tooth.
- ▶ Over time, the bacteria degrades the gum and the tooth.
- ▶ Damage you can't see occurs below the gumline, loosening the tooth.
- ▶ Dental disease can cause diseases in other parts of the body.

## Fortunately, there is a simple solution for combating dental disease.

Daily toothbrushing is the gold standard in dental care as removes plaque before it becomes permanent tartar. If your pet already has dental disease, brushing can prevent further disease and reverse early signs.

## Dentisept Adhesive Dental Gel

However brushing may not be possible in all pets for lots of reasons. This is where Dentisept comes in.

Dentisept is an adhesive oral gel that can be used either alone or after brushing.
