# NATURAL SOLUTION AGAINST EQUINE GASTRIC ULCER SYNDROME

Equine gastric ulcer syndrome (EGUS) is a disease complex in horses and foals that is associated with damage to the gastric mucosa.

Its etiology is complex with a high number of horses affected (90%). Nowadays keeping and feeding conditions (animal welfare) do not resemble the natural living conditions of horses anymore. High dosage of concentrated feed and an insufficient amount of roughage leave the stomach empty for too long. Stress during transport or competitions, oral medication or surgery can also have a negative effect on the gastric functions.

EGUS leads to pain, decreased appetite, weight loss, poor performance and behavioral changes.

**Ulcosan is a daily nutritional supplement suitable for horses of any age. The formulation contains minerals, herbs and amino acids that helps to support and restore the gastric mucosa, to minimize psychological stress and to reduce excessive stomach acid.**

## ULCOSAN IS USED

- To prevent gastric problems
- In horses with gastric problems
- During oral medication and post-surgery
- In situations of psychological strain and stress
- In periods of suboptimal intake of feed

### PROTECTIVE

Pectins derived from carrot and apple pomace build up a gel layer and protect the gastric mucosa.

### SPECIAL GRANULE DESIGN

Ulcosan comes in dry granule form allowing prolonged gastric residence times.

### NATURAL ANTI-ACID PROPERTIES

Selected amino acids and mineral salts decrease the level of acidity by reducing of excessive amounts of stomach acid.

### NATURAL ANTI-INFLAMMATORY PROPERTIES

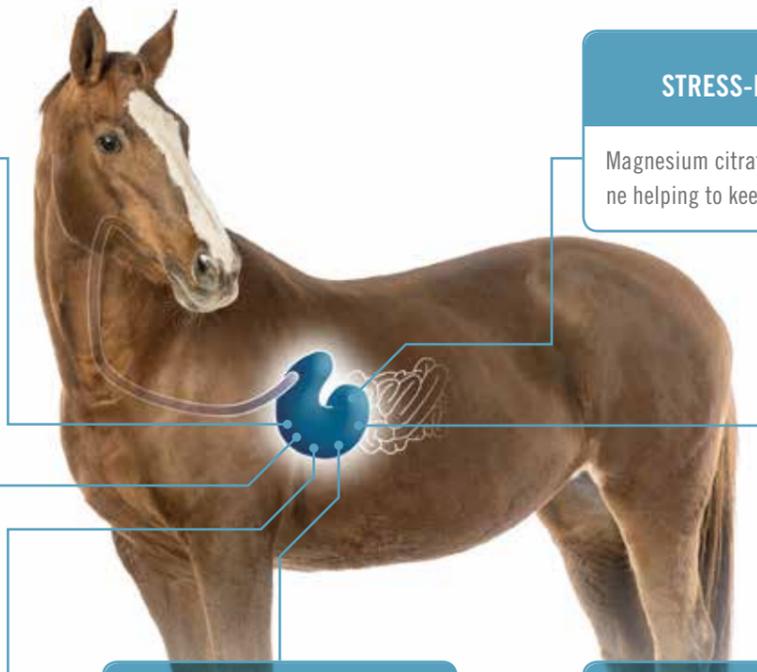

Herbal compounds like yucca schidigera and liquorice root effectively provide the natural steroid saponin, producing multiple benefits and pathways to fight gastric inflammation and reduce pain.

### STRESS-REDUCER

Magnesium citrate and tryptophane helping to keep horses calm.

### CONCOMITANT USE

Ulcosan may be used as a solitary product or in combination with other medications including anti-infective, antiparasitic, non-steroidal anti-inflammatories and other commonly administered veterinary drugs.

## ULCOSAN – HIGH QUALITY PELLETED FEED SUPPLEMENT FOR A HEALTHY GASTRIC MUCOSA

*“derbymed® Ulcosan has proven of excellent value in my clinic, both prophylactically, and for therapy of low grade gastrointestinal tract diseases. Ulcosan has also aided as an accompanying measure in severe cases of stomach ulcers. In particular because of the excellent palatability and the refined composition Ulcosan stands out from other products.”*

*(Dr. vet. Philipp Schürmann, Kitzingen, Germany)*
